Ahmed Lotfy Mahfouz

Technical Team Lead

ahmedlotfiali@gmail.com +971559290841 Dubai - UAE AhmedLotfi AhmedLotfi

ahmedlotfi.dev

Technical Team Lead and .NET full-stack engineer with 8+ years building enterprise APIs, system integrations, and microservices — now focused on bringing AI into production .NET systems. Experienced integrating both hosted LLMs (Claude, OpenAI) and self-hosted models via Ollama on NVIDIA DGX hardware for data-sensitive use cases, alongside a strong core in .NET, Angular, and cloud. Led teams delivering payment, POS, and SSO integrations at enterprise scale, ships AI-powered products independently on the side.

Skills

Languages & Frameworks
C#, .NET (Core, Entity Framework, WCF, MVC, API, gRPC), LINQ, TypeScript, HTML5, CSS3, JavaScript, Angular, JQuery, MSSQL, T-SQL.

Other Expertise
Microservices, CI/CD Pipelines, Active Directory, Single Sign-On (SSO), API Development, System Integration

Tools & Platforms
Azure DevOps, Azure Cloud, Docker, Git, AI IDEs.

AI & LLM
Claude API (Anthropic), OpenAI API, Ollama (self-hosted models on NVIDIA DGX Spark), RAG, vector search/vector DBs, Microsoft.Extensions.AI (MEAI), fal.ai (image generation)

Work Experience

11/2020 – Present
Dubai,
United Arab Emirates

ENOC
Technical Team Lead
Achievements/Tasks
- Lead a team of 5 engineers building internal and external services for enterprise retail and payment systems, owning delivery from design through production.
- Stood up self-hosted LLM infrastructure with Ollama on NVIDIA DGX Spark, running open models fully on-premises so sensitive corporate data never leaves the organization.
- Built an internal RAG assistant over 10K+ pages of internal policies and technical docs and an AI code-assistance tool used by the engineering team, cutting time spent searching documentation by ~50%.
- Developed text-classification services and autonomous agents automating automate full SDLC pipeline, code review, security review.
- Built POS and KIOSK integration services using WCF, RESTful APIs, and Software AG ESB; delivered admin portals with Active Directory and custom SSO on .NET10 and Angular 22.
- Optimized mobile-facing APIs, reducing response times by ~30%, and refactored legacy services, improving maintainability by ~40%.
- Established CI/CD pipelines and authored integration and deployment documentation adopted as the team standard.

11/2020 – 12/2025
Dubai,
United Arab Emirates

Compass International Software Company - [Part Time]
Senior Software Engineer
- Built a multi-tenant ERP platform full stack with .NET and the ABP (ASP.NET Boilerplate) framework.
- Implemented core ERP modules and the mobile-facing API layer.
- Established CI/CD pipelines for streamlined releases.

10/2019 – 11/2020
Cairo, Egypt

Compass International Software Company
.NET Full Stack Engineer / C# Developer
Achievements/Tasks
- Improved customer satisfaction by tracking and optimizing shipment requirements.
- Developed and supported JavaScript, AJAX, and C# .NET applications.
- Independently researched and solved complex problems to enhance system functionality.

07/2017 – 10/2019
Cairo, Egypt

Pearogram
.NET Full Stack Engineer / C# Developer
Achievements/Tasks
- Analysed requirements and developed scalable software solutions for multiple websites.
- Designed, implemented, and optimised web pages using HTML, JavaScript, AJAX, and JSON.
- Delivered innovative solutions for client projects, ensuring continuous improvement and user satisfaction.

Education

09/2013 – 01/2019
Shiben Elkom, Egypt

Menofya University
Bachelor of Science: Pure Mathematics & Computer Science

Projects

GenAI for .NET
Local SLM/LLM
Prototyped Chat, RAG, and vector-search applications in .NET using Microsoft.Extensions.AI, with both OpenAI and self-hosted Ollama models behind a common abstraction.

ViP
ENOC Vehicle Identification Pass System (APIs)
- Modernized the system with enhanced database design and integration with enterprise service buses.
- Built Fast-Endpoint APIs to streamline fuelling and payment processes.
- Developed an Angular-based interface for end-users.
- Integrate with third party services for online payments and SAP.
- Built ETL tool for datawarehouse and billing to generate invoices.

AnimeCV
animecv.app
- Built a full-stack web app that parses an uploaded resume and regenerates it as an anime "character card" with derived stats, archetype, and a generated hero image, exportable as an HD PDF.
- Used the Claude API for structured resume analysis and content generation, and fal.ai for image generation; handled prompt design, structured/JSON output parsing, and PDF rendering.

ENOC Services
ENOC Contactless Cards, Vending Machines, POS Machines (APIs)
- Designed contactless payment systems integrated with POS machines and vending machines, and Network International payment integration solution.
- Created financial account management solutions using service-oriented architecture.

ENOC Pay
Mobile Application
- Enhanced REST API endpoints and redesigned the application for a better user experience.
- Delivered comprehensive technical and deployment documentation.

Tenxerp
ERP System
- Developed a full-stack ERP solution using .NET technologies with robust multi-tenancy support.

Charity UAQ
Web Portal
- Built an ERP system for UAE charities with ASP.NET Core APIs, Angular for the portal, and ASP.NET Core MVC for the admin dashboard.

DMG Publisher
Web Portal
- Developed a publishing platform for books using .NET Framework and Bootstrap.
